FITTING GUIDE

"RIDE OR DIE" STICKER

White waterproof PVC sticker to decorate your frame, helmet or accessories. Choosing the spot, tool-free fitting, care and removal.

REF. AU1 · 5.6 × 8 CM, WHITE · WATERPROOF PVC, UV RESISTANT

Where to put it

On a smooth, clean, dry surface: top tube or another flat part of the frame, helmet, accessories, and also a bottle, suitcase, laptop or car. Avoid tight curves, welds, edges and spots rubbed by a cable, strap or bag. Fit it in a dry place at room temperature, neither in direct sun nor in the cold.

Step by step

1. **Choose the spot** and hold the sticker in place without removing the film. Mark the position with a piece of masking tape if needed.
2. **Clean the area** with soapy water, then isopropyl alcohol to remove grease and lubricant. Let it dry completely.
3. **Remove the film** slowly, without touching the adhesive side with your fingers.
4. **Apply the sticker** from the centre outwards, pressing firmly with your thumb or a flexible card to push out the air.
5. **Let it set** before riding in the rain or washing the bike: the adhesive grips better over time.

Care and removal

- Wash the bike as usual, with water and soap: the sticker withstands washing.
- To remove it, warm it with a hairdryer on low, lift a corner with a fingernail and peel slowly, flat against the surface.

If something goes wrong

SYMPTOM	LIKELY CAUSE	FIX
Edges lifting	Greasy surface or fitted in the cold	Press the edges firmly at room temperature
Air bubbles	Fitted too quickly	Push the air with your thumb to the nearest edge
Part stays on the film	Not enough pressure	Lay the film back, rub, peel more slowly

Specifications

Size	**5.6 × 8 cm**	Colour	**White**
Material	**PVC**	Water	**Waterproof**
UV	**Resistant**	Fitting	**No tools**

Durability

The sticker withstands UV, extreme temperatures and washing, and it does not shrink.

AVOID

- Do not fit it on a greasy, dusty, damp or cold surface: the edges would lift.
- Do not aim a pressure washer at the edges when cleaning.
- On a helmet, do not use solvent or alcohol on the shell: follow the helmet maker's advice.
- Do not peel off a sticker already pressed down to reposition it: the adhesive loses its grip.
- Do not use a blade to remove it: paint and carbon scratch.
