FITTING GUIDE

SET OF 24 REFLECTIVE SPOKE TUBES

ABS tubes wrapped in reflective film, clipped onto the spokes without tools: seen from the side, they draw the wheel in a car's headlights. Fitting, spacing, safety rules and care on one page.

REF. REFBLANC · 24 WHITE TUBES, 75 MM · SPOKES 1.8 TO 2.5 MM, TOOL-FREE CLIP

Before you start

Each tube is slit along its length: you open it onto the spoke and it snaps shut around it. It fits common spokes from 1.8 to 2.5 mm, road, mountain or city bike. The tubes do not light up: they bounce back the headlights that hit them, mostly from the side, at junctions. On the move they form a bright ring.

Fitting the tubes

1. **Wipe the spokes** with a dry cloth: dust and grease stop the tube from closing properly.
2. **Open the slit** with a fingernail and press the tube onto the spoke until it snaps shut, halfway up the spoke, clear of the fork, seat stays and brakes.
3. **Space them out** evenly around the wheel, alternating left and right spokes: 12 per wheel, or 24 on one. Uneven spacing can be felt in the wheel at speed.
4. **Spin the wheel** by hand: nothing must touch the frame, callipers or mudguard. Pull on a tube: it must hold.
5. **Check again** after the first ride and at every wash: a tube that spins freely on its spoke needs repositioning, a cracked one replacing.

CARE

- Rinse with clean water, wipe with a soft cloth: no stiff brush or solvent, the reflective film scratches and dulls.
- No batteries, no charging: the tubes work as long as the film is clean and intact.

Specifications

Contents	**24 tubes**	Colour	**White**
Material	**ABS, reflective film**	Length	**75 mm**
Inner diameter	**1.8 to 2.5 mm**	Outer diameter	**About 5 mm**
Fitting	**Clip-on**		

ON THE ROAD

- The tubes give off no light: they replace neither the lights nor the reflectors required by local regulations. They add to them.
- They show you from the side, not from the front or behind: keep front and rear lights on at night.
- A tube rubbing on the frame or a calliper can come off and jam: check for free clearance before every ride.

GOOD TO KNOW

- Bladed or aero spokes, spokes thicker than 2.5 mm: the tube will not close, do not force it.
- The film is white by day and looks brilliant white in headlights: the colour makes no difference to reflection.
