QUICK GUIDE

HIGH-VISIBILITY REFLECTIVE SASH BELT

Elastic band worn across the chest, shoulder to hip, with a reflective strip along its full length and a carabiner at the end. Putting on, adjusting, safety rules and care on one page.

REF. CEINTREFJAUNE · ADJUSTABLE LENGTH 100 TO 200 CM · 2 CM REFLECTIVE STRIP, CARABINER

What the sash does

The grey strip bounces headlight beams back to their source: a driver whose lights hit you sees you from further away, from the front and from behind since the band runs right round your torso. With no light falling on it, it does not glow. The sash is a closed loop: you slip it over your head and one arm, then set the length at the sliding keeper. The carabiner at the end holds keys or a small item.

Putting on and adjusting

1. **Slip the loop** over your head and one arm, like a shoulder bag: the band crosses your chest and back, reflective strip facing out.
2. **Set the length** at the sliding keeper, between 100 and 200 cm: the band should sit flat without sawing into your shoulder and without flapping at the back.
3. **Place the carabiner** at your hip, where it does not knock against the bike or your leg. Clip on keys, a small light, a whistle.
4. **Check before you go** that nothing covers the strip: backpack, open jacket, scarf. Wear the sash over your last layer.

CARE

- Hand wash, lukewarm water, mild detergent. No bleach, no tumble dryer, no iron on the reflective strip.
- Dry in the open air, away from a radiator. Check the strip, keeper and carabiner from time to time.

Specifications

Length	**100 to 200 cm**	Width	**5 cm**
Strip	**2 cm, reflective**	Material	**Elastic webbing**
Accessory	**Carabiner**	Use	**Running, cycling, walking**

ON THE ROAD

- The sash gives off no light: it replaces neither your bike lights nor the mandatory or certified vest required by local regulations. It adds to them.
- At night and in grey weather, keep your lights on: the strip only works for whoever is lighting you.
- The carabiner is not a safety attachment point: keys or a light item, nothing else.

GOOD TO KNOW

- Only the grey strip reflects. The webbing colour helps by day, not at night.
- A single diagonal band covers less than a crossed harness: for night cycling, add a rear light.
