QUICK GUIDE

CYCLAMI HEART RATE CHEST STRAP

Replacement strap for snap-on heart rate modules, adjustable up to about 98 cm. Compatibility, fitting, care and troubleshooting.

REF. CYCLAMIBELTBLCK · MAGENE, IGPSPORT, COOSPO, XOSS · HEART RATE MODULE NOT INCLUDED

Before you start

This strap replaces the fabric part of a worn or stretched heart rate belt: you keep your electronic module, which is **not included**. Check the table to make sure yours is compatible: it depends on its fixing and the spacing of its studs.

Fitting

1. **Clip on the module** onto the two snap studs on the front, lined up. Press each one firmly.
2. **Wet the electrodes** the contact areas on the inner side, with a wet finger. On dry skin, the signal is poor at first.
3. **Put the strap on** around your chest, just below the chest muscles, module centred, electrodes against the skin.
4. **Close the strap** by hooking the clasp into the loop at the other end.
5. **Adjust the length** with the slider: the strap stays put when you move, without restricting your breathing.
6. **Check the signal** on your watch or bike computer before setting off.

Compatibility

BRAND	COMPATIBLE	NOT COMPATIBLE
Magene	H64, H303	H603
iGPSPORT	HR40, HR50	
COOSPO	H6, H8, H808S	
XOSS	X1, X2	

Other modules: check the fixing and the spacing of the studs.

Care

- After each session, unclip the module and rinse the strap in clean water.
- Hand wash with mild soap, without wringing; dry flat, away from heat.

IF SOMETHING GOES WRONG

- No signal, erratic readings: wet the electrodes again and tighten the strap.
- The module comes off: check it is listed in the table and pressed onto both studs.
