FITTING GUIDE

TEMPERED GLASS FOR GARMIN FENIX 6, 6 PRO AND 6 PRO SOLAR

9H tempered glass cut to the screen diameter of the Garmin Fenix 6, 6 Pro and 6 Pro Solar. It takes the scratches and small knocks instead of the original screen. Preparation, fitting in five steps, and what to do if a bubble or a speck of dust gets in.

REF. ECRFENIX6 · GARMIN FENIX 6, 6 PRO, 6 PRO SOLAR · 9H TEMPERED GLASS

Before you start

- Work in a room with no dust or draught, a bathroom after a shower for instance: the steam brings airborne dust down.
- Wash your hands and lay the watch flat, screen up. Have the supplied wipes and a stiff card (a loyalty card, say) to hand.
- A glass goes on once: take the time to line it up before letting it touch the screen.

Fitting in five steps

1. **Clean the screen** with the supplied wipes, then let it dry. Check in raking light that no smear or speck of dust is left.
2. **Peel off the backing** on the adhesive side of the glass. Hold the glass by its edge, without touching the sticky face.
3. **Line up the glass** above the screen, centred inside the bezel, without laying it down. The edge of the glass must stay inside the metal rim.
4. **Lay it from the centre** by pressing lightly in the middle of the glass: the silicone adhesive spreads to the edges on its own.
5. **Push out the bubbles** from the centre to the edges with the card. Any remaining micro-bubbles clear by themselves within 2 to 3 days.

AVOID

- Fitting on a damp or still-warm screen: the adhesive will not take.
- Cleaning the glass with an abrasive product or a solvent: a soft cloth is enough.

Specifications

Fits	**Fenix 6, 6 Pro, 6 Pro Solar**	Material	**Tempered glass**
Hardness	**9H**	Transparency	**About 99%**
Finish	**Oleophobic**	Adhesive	**Bubble-free silicone**

IF SOMETHING GOES WRONG

- **Dust under the glass**: gently lift the nearest edge with a fingernail, pick the speck off with a piece of sticky tape, lay the glass back down.
- **Glass off-centre**: peel it off straight away, gently and from one side only, then start again. Once the adhesive has set, leave it in place.
- **Glass cracked after a knock**: it has done its job. Replace it without delay so you do not cut yourself on a chip.

Day to day

- Wipe the glass with a soft cloth: the oleophobic finish holds few fingerprints.
- After a sea swim or a heavy sweat, rinse the watch in fresh water and dry it: salt and sand scratch the glass when rubbed dry.
