FITTING GUIDE

RAIN COVER FOR BIKE SADDLE

PVC-coated Oxford fabric cover, silver PU inside, elastic edge: it caps the saddle when the bike is parked in the rain or stored, and comes off in a second before riding. Fitting, removal and care on one page.

REF. HOSELLEBLCK · ROAD, MTB, HYBRID AND KIDS' SADDLES · OXFORD + PVC, 27 × 24 CM, 11 G

Before you start

The cover is saddle-shaped: a point for the nose, a wider back, and an elastic edge all round that tucks under the shell. It fits most saddles, from the narrowest to the widest. The silver side goes against the saddle.

Fitting the cover

1. **Wipe the saddle** if it is already wet: the cover keeps water out, it does not dry what is underneath.
2. **Line up the cover** point towards the saddle nose, silver side towards the saddle.
3. **Slip the nose in** first, then stretch the elastic backwards and pass it under the wide part of the saddle.
4. **Go all the way round** with your fingers to tuck the elastic edge under the shell along the whole rim. Smooth the top: a crease holds water, a lifted edge lets it in.
5. **Take it off before riding** by lifting the back then the nose. Shake the water off, fold it wet side in and slip it into a pocket or a bag.

DAY TO DAY

Keep it permanently in your bag or jacket pocket: it goes on at every stop in the rain, at the office as well as outside the shop, and also shields the saddle from the sun when the bike stays outdoors.

Road, MTB, hybrid or kids' saddle: the elastic takes the shape.

Specifications

Material	**Oxford + PVC**	Inside	**Silver PU**
Size	**27 × 24 cm**	Weight	**About 11 g**
Colour	**Black**	Contents	**1 cover**

GOOD TO KNOW

- Do not ride with the cover on: PVC is slippery and does not breathe. It is for when the bike is parked.
- A saddle too wide for the elastic leaves edges uncovered: water gets in. Check that the edge tucks under all the way round.
- Stored wet for several days it starts to smell: let it dry open as soon as you can.
- Clean with warm water and a cloth, never in the machine, no solvent and no drying on a radiator.
