USER GUIDE

DAREVIE AERO OVERSHOES

Tall, close-fitting overshoes, windproof and rain resistant, covering the cycling shoe and the calf. Putting on, sizing, care and troubleshooting.

ROAD, MTB, TIME TRIAL · SIZES 38-39 TO 46-47 · HOOK-AND-LOOP, 90 G

01 · GETTING STARTED

CONTENTS, PUTTING ON, FIRST RIDE

What you have

A pair of unisex overshoes. At the bottom, an **elastic PU upper** covers the shoe and keeps out wind, dirt and moisture. At the top, a **striped calf section** stays in place thanks to an inner silicone band. Under the sole, an opening leaves room for the cleat; it closes with an adjustable hook-and-loop strap.

Putting them on

1. **Put the overshoes on first** without your shoes: pull the top up onto the calf, silicone band against the skin, and leave the lower part rolled up at the ankle.
2. **Put on your cycling shoes** and fasten them as usual.
3. **Cover the shoes** by rolling the lower part down from the ankle to the toe, without pulling on the seams.
4. **Adjust front and back** so the toe and heel are fully covered, sole opening centred: the cleat must stay completely clear.
5. **Fasten underneath** with the hook-and-loop strap, flat under the sole, without covering the cleat. Smooth out any creases.

BEFORE YOU RIDE

- Clip each cleat in and out while stationary: the overshoe must never get in the way of the pedal.
- Check that no strap or loose fabric hangs near the crankset or the chain.
- If an overshoe slips while riding, adjust it once stopped, not while pedalling.

Specifications

Use	**Road, MTB, time trial**	Users	**Men / Women**
Upper	**Elastic PU (50% PU, 50% nylon)**	Calf	**Striped fabric (80% polyester, 20% elastane)**
Grip	**Inner silicone band**	Closure	**Adjustable hook-and-loop under the sole**
Protection	**Windproof, rain resistant**	Weight	**90 g**

Under the sole: cleat clear, strap closed flat.

02 · DAY TO DAY

SIZING, CARE, TROUBLESHOOTING

Choosing your size

Five sizes, chosen by the size of your cycling shoes: **38-39**, **40-41**, **42-43**, **44-45** and **46-47**. The fit is compressive: once fitted, the overshoe sits slightly taut on the shoe, with no creases or air pockets.

Taking them off

1. **Open the hook-and-loop strap** under the sole.
2. **Roll up the lower part** from the toe to the ankle.
3. **Remove your shoes** then the overshoes, sliding them down the calf without pulling on the seams.

Care

- Close the hook-and-loop strap before washing so it does not snag other garments.
- Machine wash at 40 °C on a delicate cycle.
- No bleach, no tumble dryer, no dry cleaning: let them air dry.
- Iron on a low setting only, avoiding the prints.
- After a muddy ride, rinse the upper and clear debris from the strap before it dries.

If something goes wrong

SYMPTOM	LIKELY CAUSE	FIX
Cleat catches the fabric	Sole opening off centre	Recentre the opening, close the strap without covering the cleat
Strap does not hold	Strap dirty or badly closed	Clean the hook-and-loop, close it flat
Top slides down the calf	Silicone band badly placed	Pull it back up, silicone directly against the skin
Creases over the shoe	Front and back not adjusted, or size too large	Readjust toe and heel; check the size
Very hard to put on	Shoes put on first, or size too small	Follow the steps in order; check the size

Pull the top up onto the calf, silicone band against the skin, before putting on your shoes.

WHEN TO WEAR THEM

In wind or cool, damp weather, on the road as on the trail. In a time trial or a fast ride, the smooth upper and striped calf cover shoe and leg in one piece, with no creases.

GOOD TO KNOW

- Rain resistant, not waterproof: in heavy rain, water eventually gets through.
- Avoid walking far in them: the underside and the strap wear against the ground.
- Store them clean and dry, strap closed.
