HANDS-FREE WAIST LEASH FOR DOGS

Running belt with storage pouch and 160 to 220 cm bungee leash for running or walking hands-free with a medium or large dog. Setting up, adjustments, safety and care.

REF. SACANI1 · WAIST 65 TO 115 CM · BUNGEE LEASH 160 TO 220 CM, REFLECTIVE

01 · GETTING STARTED

CONTENTS, SETTING UP, SAFETY

In the box

- The waist belt with pouch: zipped pocket for a 4 to 7 inch phone, hook-and-loop pocket, earphone port, side bottle holder, reflective strip, adjustable buckle strap, leash buckle on one side and D-ring on the other.
- The bungee leash: clip buckle on the belt end, sleeved elastic section, padded control handle and swivel snap hook on the dog end.

Before the first outing

This leash is for a dog already used to walking on a leash by your side without lunging. Attach it to a harness for preference: the pull is spread over the chest rather than the neck. Do the first outings at walking pace, somewhere quiet.

Setting up

1. **Adjust the belt** to your waist (65 to 115 cm): close the buckle, pull the strap until the pouch stays put when you bounce, without squeezing you.
2. **Position the attachment point** on your hip, or at your back: the leash then runs to the dog without getting in the way of your legs.
3. **Clip the leash** into the side buckle of the belt until it clicks. Pull on it to check.
4. **Attach the dog** with the swivel snap hook, to the ring of the harness or collar. Check that the catch has closed properly.
5. **Set the length** while stationary: short in town and near others, longer on an open trail.
6. **Stow your things** phone in the zipped pocket, earphones through the cable port, keys in the hook-and-loop pocket, small bottle in the holder.

Specifications

Use	**Running, walking with a dog**	Dogs	**Medium, large and strong**
Waist	**65 to 115 cm**	Leash	**Bungee, 160 to 220 cm**
Visibility	**Reflective stitching and strip**	Phone	**4 to 7 inches**
Material	**Nylon, metal fittings**		

SAFETY

- You remain in charge of the dog: the bungee softens the jolts, it replaces neither recall nor leash training.
- Keep a hand near the control handle when approaching a crossing, a bike, another dog or a child.
- A powerful dog that lunges can pull you off balance: anticipate, shorten the leash and keep a firm stance.
- For running and walking only: do not use it on a bike, a scooter or roller skates.
- The reflective elements are no substitute for a light: at night, add a lamp or a clip light, for you and for the dog.

02 · DAY TO DAY

OUT ON THE TRAIL, CARE, TROUBLESHOOTING

The parts of the leash

Elastic section	Stretches up to 220 cm under pull and softens the jolts.
Control handle	Near the snap hook: grab it to bring the dog in to your side in one move.
Swivel snap hook	Turns on itself: the leash does not twist when the dog changes side.
Clip buckle	Releases the leash from the belt in one move, to hold it by hand.

Leash 160 to 220 cm: short at rest, it stretches under pull.

Care

- Wash the belt and leash by hand in warm soapy water, then rinse. Air dry, away from any heat source, never in a tumble dryer.
- Empty the pockets and open the zips before washing, phone removed.
- After mud or the beach, rinse the snap hook and buckles in clean water: sand jams the springs.
- Before every outing, check the snap hook, stitching and elastic: a frayed leash or a weak catch must be replaced.

If something goes wrong

SYMPTOM	LIKELY CAUSE	FIX
Belt spins while running	Strap too loose, attachment point badly placed	Tighten, place the attachment on your hip or at your back
Dog pulls in jolts	Leash too long for the place, dog not yet used to it	Shorten, drop back to walking, work on heeling
Leash comes off	Snap hook not closed or clogged	Check the catch, rinse; replace it if it no longer snaps shut

GOOD TO KNOW

- The leash can also be held by hand by its handle, unclipped from the belt, for tricky stretches.
- Never leave a dog tied up alone by the belt or to a fixed point with this leash: the bungee is not made for that.
- A dog that pulls constantly wears the elastic out faster: teach it to walk on a loose leash and the leash will last.
