USER GUIDE

RECHARGEABLE LED LIGHT, RED, BLUE AND WHITE

Compact 24 g light, up to 200 lm, 5 white, red and blue modes, USB-C rechargeable. Worn on its clip on a bag, a belt or clothing, or mounted on a bike tube with the supplied bracket and strap. Fitting, controls, charging and troubleshooting.

REF. SPLAMPCLIPBLCK1 · UP TO 200 LM, 5 MODES, IPX3 · USB-C, ABOUT 6 H RUN TIME

01 · GETTING STARTED

CONTENTS, FITTING, FIRST RIDE

In the box

- The light: main LED and 12 auxiliary SMD LEDs in two rows, button on top, USB-C port under a cap at the base, clip and mounting rail on the back, eyelet at the top.
- A bike mounting bracket, which slides into the rail on the back.
- A rubber strap that hooks onto the two hooks of the bracket.
- A USB charging cable.

Two ways to fix it

On the clip, the light slides onto a belt, a bag strap, a pocket or clothing. **On the bracket**, it mounts on a seatpost, a handlebar or any bike tube, and comes off in one move by sliding it out of the rail.

Setting up

1. **Charge the light** over USB-C, cap lifted, from a charger, a computer or a power bank: about 4 hours for a full charge.
2. **Slide the bracket** into the rail on the back of the light, all the way. For clip use, skip the next two steps.
3. **Hook the strap** onto one hook of the bracket, pass it around the tube and stretch it to the other hook. Pick the hole that holds without forcing.
4. **Aim it** LEDs facing backwards on the seatpost (red and blue, or low white as a position light), forwards on the handlebar (white). Shake it: nothing must move.
5. **Switch on and test** while stationary: the button switches the light on, then cycles through the 5 modes. Close the USB-C cap before setting off.

Specifications

Colours	**White, red, blue**	Brightness	**Up to 200 lm**
Modes	**5**	LEDs	**Main + 12 SMD**
Charging	**USB-C, about 4 h**	Run time	**Up to about 6 h**
Weather	**IPX3, splashes**	Material	**ABS + PC**
Dimensions	**Approx. 7.8 × 3.1 × 2 cm**	Weight	**Approx. 24 g**

ON THE ROAD

- The red and blue modes are presence signals for walking, running or a bag: on public roads, a bike's legal lights remain white or yellow at the front and red at the rear. Check the rules in your country.
- Never point the bright white at another road user's eyes: tilt the beam down to the ground.
- Pick the mode while stationary; on the move, eyes stay on the road.
- IPX3: the light copes with rain, not with immersion or a pressure washer.

02 · DAY TO DAY

MODES, CHARGING, TROUBLESHOOTING

The 5 modes

Bright white	Main LED at full power: extra light on a dark path.
Low white	Main LED dimmed: position light, long run time.
Red and blue flashing	Auxiliary LEDs alternating: a highly visible signal.
Auxiliary bright white	The 12 SMD LEDs at full power: wide, soft light.
Auxiliary low white	The 12 SMD LEDs dimmed: night light, maximum run time.

Charging and care

- Run time up to about 6 hours depending on the mode: bright modes and flashing shorten it. Recharge after every night outing.
- Charge somewhere dry, then close the cap properly: it is what keeps splashes out of the port.
- After rain, wipe the light and let the port dry before plugging in.
- Stored for several weeks, recharge it before use: a battery left empty deteriorates.

If something goes wrong

SYMPTOM	LIKELY CAUSE	FIX
Light does not switch on	Battery empty	Charge for about 4 hours, then try again
It does not charge	Cable or charger at fault, damp port	Try another cable, dry the port
Short run time	Bright white or flashing used continuously	Switch to a low mode, charge more often
It turns on the tube	Strap too loose, tube too thin	Use a shorter hole or move to a wider section

Bracket slid into the rear rail, strap stretched around the tube.

GOOD TO KNOW

- The clip and the rail are both on the back: the light can be worn on the clip with or without the bracket, but the bracket is only useful on a tube.
- The eyelet at the top takes a cord or a key ring: handy for finding it in a bag.
- The stated dimensions are those of the light alone, bracket not fitted.
