INFLATABLE CAMPING SEAT WITH ADJUSTABLE BACKREST

Inflatable ground seat with a strap-adjusted reclining backrest, built-in hand pump and a second valve for an electric pump. Inflating, adjusting, deflating, storage and precautions.

REF. SPSIEGEKAKI1 · MAXIMUM LOAD 150 KG · 40D AND 420D NYLON, 0.9 KG

01 · GETTING STARTED

CONTENTS, INFLATING WITHOUT A PUMP, SAFETY

In the box

- The inflatable seat with backrest, its sewn-in adjustment straps and its built-in hand pump.
- A carry and storage bag.

Two valves on the back of the backrest

Both valves sit side by side at the top of the backrest, at head level. The **hand-pump valve** is a plain opening with a cap: this is the built-in pump. The **large double-cap valve** takes an electric pump and is also used for fast deflation.

Inflating without a pump

1. **Unroll the seat** on clean ground, free of stones and sticks, backrest flat.
2. **Open the cap** of the hand-pump valve. Check that the large valve is closed, both caps in place.
3. **Press the inflatable area** around the valve with your hands or foot, then release: the area springs back and draws in air.
4. **Repeat** pressing and releasing until the seat is as firm as you like. A firm seat insulates better from the ground.
5. **Close the cap** by pushing it fully home. Pull on it: it must hold.

Adjusting the backrest

The side straps set the backrest angle. For an upright position, shorten them by pulling the free end through the buckle; to lie back, lengthen them. Same length on both sides: once seated, the straps must be taut, they alone hold the backrest.

Specifications

Maximum load	**150 kg**	Inflated thickness	**About 8 cm**
R-value	**3.0 and above**	Materials	**40D TPU nylon, 420D nylon**
Reinforced edge	**About 6 cm**	Support	**Fibreglass elements**
Inflation	**Built-in hand pump or electric pump**	Weight	**About 0.9 kg**

PRECAUTIONS

- This seat is not a flotation or life-saving device: never use it in water or as a swimming aid.
- Keep it away from flames, embers and stoves: nylon melts and hot air raises the pressure.
- Respect the 150 kg maximum load, one person at a time. No jumping or standing on the seat.
- Keep sharp objects away: knives, pegs, skewers, animal claws. A puncture deflates the seat.

02 · DAY TO DAY

PUMP, DEFLATING, CARE, TROUBLESHOOTING

Inflating with an electric pump

1. **Remove the first cap** of the large valve, the outer cap only. The inner part stays in place: it limits air flowing back out.
2. **Fit the nozzle** of a compatible pump onto the opening and inflate until the seat is as firm as you like, without trying to make it rock hard.
3. **Remove the pump** and close the outer cap carefully.

Deflating and packing

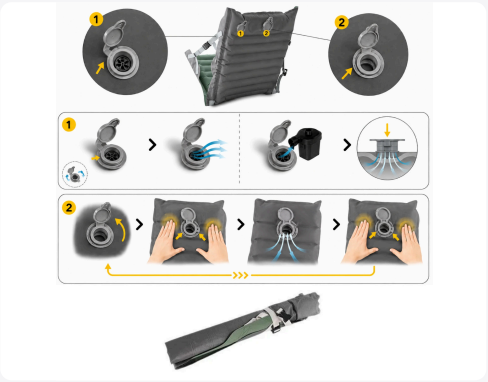

1. **Open the large valve** fully: the outer cap, then the inner part. Air escapes freely.
2. **Roll the seat up** from the bottom of the seat towards the valves, pressing to push out the remaining air.
3. **Close both parts** of the valve and the cap of the hand-pump valve, then slide the seat into its bag.

Care

- Clean with a sponge and soapy water, never in a washing machine or with solvent.
- Air-dry the seat, open and in the shade, before packing it: trapped moisture stains and degrades the fabric.
- Store it deflated, dry, away from sun and heat.

If something goes wrong

SYMPTOM	WHAT TO DO
Seat deflates within a few hours	Check the caps of both valves, then look for a leak with soapy water
A cap no longer seals properly	Wipe the valve and cap: a grain of sand or dry grit is enough to cause a leak
Hand pump does not draw air	Close the large valve: both its caps must be in place
Backrest does not hold	Tighten the straps on both sides, to equal length

On the back of the backrest: the large double-cap valve (pump, deflation) and the hand-pump valve to press.

GOOD TO KNOW

- The seat softens a little in the cold of the night and tightens in the sun: add a few presses, or briefly open the cap if it gets very hard.
- No electric pump is supplied: any pump whose nozzle fits into the large valve will do.
- On rock or rough ground, put a mat or tarp under the seat.
