QUICK GUIDE

RETRACTABLE BIKE TOW ROPE WITH REAR LIGHT

Reel housing fixed under the saddle, 3 m reflective rope with carabiner that winds itself back in, and a built-in LED rear light: to help another rider, child or adult, up a climb or through a bad patch. Fitting, towing, safety and the light on one page.

REF. SPTRACTVELLUMBLCK1 · 3 M ROPE, STATED LOAD 130 KG · 5-MODE LED LIGHT, 200 MAH BATTERY

Fixing the housing under the saddle

1. **Thread one strap** through the side opening of the housing, around the seatpost, and tighten.
2. **Thread the second strap** through the top opening, around the saddle rails, and tighten. Rope exit facing back, light visible from behind.
3. **Shake the housing** it must neither pivot nor slide. Other positions: seatpost only, or the towing bike's handlebar, same straps, same check.

Towing

1. **Clip the carabiner** to the stem or head tube of the towed bike. Never to the handlebar, cables, a lever or the fork.
2. **Pay out the rope smoothly** by moving off gently: the reel keeps it taut, up to 3 m. It must touch no wheel, spoke or chain.
3. **Ride at walking pace, in line** call out braking and turns; the towed rider keeps both hands on the bars, pedals and brakes for themselves.
4. **Unclip when stopped** then let the rope wind back in, guiding it by hand to the housing.

The rear light

- One press switches the light on and cycles its 5 modes: steady, low power, flashing.
- Built-in 200 mAh battery: charge somewhere dry, before any night ride. Rope wound in, the housing stays on the bike day to day and serves as a rear light.

GOOD TO KNOW

- The light and reflective rope add to the bike's lighting: they replace neither the lights nor the vest required by local regulations.

BEFORE TOWING

- Tow only someone who can brake and hold a line on their own; a child stays under an adult's constant supervision, helmets for both.
- Low speed, no fast descents or sprints: the towed rider feels every one of your accelerations and braking.
- Paths, trails and quiet lanes; on public roads, check local regulations first.
- Before every ride, check rope, carabiner and straps: frayed, bent or loose, you do not ride.
- Stated load 130 kg, towed rider and bike included. Never a knot, never more than one bike.

Specifications

Rope	**3 m, reflective**	Retraction	**Automatic**
Load	**130 kg stated**	Material	**ABS, nylon**
Light	**LED, 5 modes, 200 mAh**	Mounting	**Straps, no tools**
