QUICK GUIDE

# RUBBER ARROW PULLER

Non-slip rubber grip that closes around the arrow shaft to pull it out of the target without effort, without bending the shaft or hurting your fingers. Supplied with a hook to keep it on your quiver. Use on one page.

**REF. TIRFLECH1** · CLASSIC, RECURVE, COMPOUND BOWS · 11 × 3 CM, 82.8 G

## Before use

The puller is a block of rubber folded on itself, with a central groove that takes the arrow shaft. Squeezed in the hand, it wraps the shaft and multiplies the grip, even with wet or cold hands. It suits arrows for classic, recurve and compound bows. The supplied hook clips to a quiver, a belt or a bag.

## Pulling an arrow

1. **Check the shooting line** every archer has finished shooting and nobody is standing behind you.
2. **Stand to the side** of the arrow, never in line with it: a nock that comes free suddenly is aimed at your face.
3. **Put one hand flat** on the target, beside the arrow, to hold it in place.
4. **Close the puller** around the shaft, as close to the target as possible, shaft at the bottom of the groove, and squeeze firmly.
5. **Pull in line** with the arrow, in one steady movement, twisting slightly if it resists. Never lever sideways: the shaft bends.
6. **Hook the puller** to your quiver or belt as soon as the arrow is out, so you do not lose it on the range.

## Specifications

| | | | |
|---|---|---|---|
| Length | **11 cm** | Width | **3 cm** |
| Weight | **About 82.8 g** | Material | **Rubber** |
| Contents | **1 puller** | Attachment | **1 hook** |

*Squeezed on the shaft close to the target, pull in line with the arrow.*

### GOOD TO KNOW

- Squeeze the puller away from the fletching and nock: it holds the shaft, not the vanes.
- An arrow buried deep or stuck in a wooden frame comes free with small twisting movements, not one hard pull.
- Clean the rubber with soapy water and dry it before storing: a greasy puller slips.
- Store it away from sun and heat, which harden the rubber.
