FITTING GUIDE

REFLECTIVE WHEEL STICKERS FOR NINEBOT MAX G30

Set of four reflective PVC adhesive strips, cut for the sides of the front and rear wheel arms of the Ninebot Max G30 scooter. Preparation, fitting, safety rules and removal on one page.

REF. STICKERROUEG30 · 4 STICKERS, 8 X 1.3 CM · REFLECTIVE PVC, WATER AND UV RESISTANT

Before you start

The stickers go on the flat surfaces that frame each wheel: the two front fork arms and the two rear arms, one sticker per side. If an original strip occupies the spot, remove it first. The film bounces headlight beams back to their source: a driver whose lights hit you from the side sees your wheels. With no light falling on it, it does not glow. The adhesive is pre-applied: fitting is done in one go, with no repositioning.

Fitting the stickers

1. **Clean the spot** with soapy water then alcohol, and dry: the slightest trace of dust or grease lifts the edge.
2. **Dry-fit the sticker** without removing the backing film, to find its position: centred on the flat of the arm, touching neither tyre, brake nor a fairing edge.
3. **Peel the backing** off, lay one end of the sticker down, then apply the rest by rolling it on with your thumb to push the air out.
4. **Press firmly** over the whole surface, especially the edges. Repeat for the other three, at the same height on each side.
5. **Let it set** for a day with no washing or rain. Spin each wheel by hand: nothing must rub.

CARE AND REMOVAL

- Wash with a sponge and mild soap; no pressure washer on the edges, no solvent on the film.
- To remove: warm gently with a hair dryer, peel slowly from one corner, clean residue with alcohol.

Specifications

Compatibility	**Ninebot Max G30**	Contents	**4 stickers**
Dimensions	**8 × 1.3 cm**	Material	**Reflective PVC**
Resists	**Water, wear, UV**	Colours	**Red, yellow, blue or white**

ON THE ROAD

- The stickers give off no light: they replace neither the lights nor the reflectors required by local regulations. They add to them.
- They show you from the side, not from the front or behind: keep front and rear lights on at night.
- A badly placed sticker touching the tyre or brake peels off and can get in the way: check for free clearance.

GOOD TO KNOW

- Do not fit in cold or damp weather: the adhesive bonds poorly below about ten degrees.
- The colour shows by day; in headlights, each shade reflects light in its own colour, white the strongest.
