USER GUIDE

UNIVERSAL SILICONE SMARTPHONE HOLDER

A stretchy silicone cradle with four arms, mounted on a swivel disc and a notched strap that buckles onto the handlebar without tools. Phones from 4.5 to 7 inches, with or without a case. Mounting, orientation, removal and care.

REF. SUP7 · PHONES FROM 4.5 TO 7 INCHES · SWIVEL CRADLE, NO TOOLS

01 · FITTING

CONTENTS, COMPATIBILITY, MOUNTING

In the box

- The holder, in one piece: the four-arm silicone cradle, its swivel disc and the notched strap with its ribbed buckle.
- No tools, nothing to screw: the strap buckles and tightens by hand.

What it takes

Smartphones from **4.5 to 7 inches**, with or without a case, even a thick one (airbag, magnetic or silicone case). The arms go over the corners of the phone and leave the screen, buttons and camera free. The strap buckles onto any standard round handlebar: city bike, road bike, mountain bike, scooter.

Mounting on the bar

1. **Find the spot** near the stem, on a smooth round section, away from cables, brakes and shifters. Wipe the bar.
2. **Pass the strap** under the bar, then through the ribbed buckle. Pull to the notch that makes it firmly tight and fold it back: the notches lock it.
3. **Shake the holder** while stationary, then twist it: it must neither turn nor slide. If it does, undo the strap and take up one more notch.
4. **Fit the phone** in the cradle, then stretch the arms over its four corners one at a time, the two lower ones first. An arm over a button or the camera: shift the phone.
5. **Swivel the cradle** on its disc to go from portrait to landscape, and check that the phone no longer moves in its arms.

Specifications

Phones	**4.5 to 7 inches**	Cases	**Yes, even thick ones**
Material	**Stretchy silicone**	Mounting	**Buckle strap, no tools**
Orientation	**Swivel cradle**	Use	**City, road, MTB, scooter**

BEFORE RIDING

- While stationary, shake the holder, then the phone: if anything moves, start again. A badly placed arm lets go at the first bump.
- On the move, leave the phone alone: route, music and calls are set while stopped.
- A large, heavy phone on silicone arms can jump out on cobbles, roots or a pothole: slow down there, or put it in a pocket.

02 · DAY TO DAY

ORIENTATION, REMOVAL, CARE

Orientation and adjustments

Portrait, landscape	The cradle swivels on its disc with the phone in place. Landscape for a map, portrait for a tracking or calling app.
Viewing angle	Set it before tightening: turn the holder on the bar so you see the screen from the saddle, without glare, then tighten the strap.
Small phone	Centre it in the cradle before stretching the arms: off-centre, a single arm does the work and eventually lets go.

Removal and care

- To take the phone back, spread the two upper arms and lift it out. The holder stays in place.
- To move to another bike, open the buckle and pull the strap out: nothing else to dismantle.
- Wash the silicone in soapy water, rinse, let it dry. No solvent or alcohol: silicone turns sticky and brittle.
- Look at the arms before every ride: a split, whitened or stretched-out arm no longer holds, replace the holder.
- In the sun, when parked, take the phone out of the holder: it heats up fast and may switch itself off.

If something goes wrong

SYMPTOM	LIKELY CAUSE	FIX
Holder turns on the bar	Loose strap, greasy or wet bar	Wipe, tighten by one more notch
Phone slides in the cradle	Arms off the corners, phone off-centre	Re-centre, reposition all four arms
Cradle will not swivel	Phone jammed against the buckle	Lift the phone slightly, swivel, put it back
Screen stops reacting	Water drops, gloves	Wipe the screen, stop to use it

The notched strap passes under the bar and locks in the ribbed buckle.

GOOD TO KNOW

- The holder holds the phone, it does not protect it: neither from rain nor from the bike falling over. In a downpour, put the phone away or slip it into a pouch.
- Four arms, always: with three, the phone goes at the first pothole.
- With a thick case, stretch the arms further; the silicone is made for it.
