FITTING GUIDE

HD 9H TEMPERED GLASS COROS DURA

Full-glue HD 9H tempered glass, cut for the Coros DURA, supplied with its fitting wipes. Three moves, one fitting only: follow the order.

COROS DURA · HD 9H TEMPERED GLASS · FULL-SURFACE ADHESIVE

Before fitting

- A room with **no dust in the air** and no draught: dust is what makes bubbles.
- Clean hands, computer switched off, screen dry and at room temperature.
- The wipes from the pack: the **wet wipe**, the **dry cloth** and the **dust-removal sticker**. A piece of adhesive tape is handy to rescue a speck of dust.

Fitting in three steps

1. **Clean the screen** with the wet wipe, dry it with the dry cloth, then dab the whole surface with the dust-removal sticker. Check against the light: no smear, no grain.
2. **Align and position.** First dry-fit the glass with its film on, to see where it sits against the edges of the screen. Then peel the film off the adhesive side, holding the glass by its edges, line it up on the mark and lay it down.
3. **Press the centre, then out to the edges.** The full-surface adhesive spreads across the whole glass. Smooth from the centre outwards with the dry cloth or a soft card to push out the air. Any remaining micro-bubbles clear on their own within 24 to 48 h.

Specifications

Compatibility	**Coros DURA**	Glass	**Tempered HD, 9H**
Transmission	**Up to 99 %**	Adhesion	**Full-surface**
Touch	**Preserved**	Pack	**1 glass + wipes**

IF SOMETHING GOES WRONG

- **Trapped dust** (white dot with a halo): lift the nearest corner with adhesive tape, pick the particle off with another piece of tape, lay it back down.
- **Misaligned glass**: lift it off entirely right away and start again from step 2.
- **Stubborn bubble** after 48 h: there is dust underneath, see the first point.

DON'T

- No fitting on a cracked screen, nor under a case already in place: the case goes on after the glass. A glass cracked by a fall has done its job: replace it.
