USER GUIDE

# GARMIN EDGE 1050 PACK: CASE AND HYDROGEL FILM

Black silicone case moulded for the Garmin Edge 1050 and a self-healing hydrogel film, soft, glare-free, with an oleophobic surface. Film first, case second: this guide covers fitting, care and troubleshooting.

**GARMIN EDGE 1050** · SELF-HEALING HYDROGEL FILM · BLACK SILICONE CASE

01 · CONTENTS

## PACK CONTENTS AND FITTING THE FILM

### In the pack

| ITEM | QTY | DETAILS |
|---|---|---|
| Silicone case | 1 | Black, made for the Edge 1050; buttons and charging port free |
| Hydrogel film | 1 | Ultra-thin, self-healing, glare-free, oleophobic, touch preserved |

### Fitting the film

1. **Clean the screen** with alcohol or a damp wipe, dry it with the microfibre, dab it with the tape. Check against the light: no smear, no speck.
2. **Dry-fit the film** with its liner on: it covers the glass right to its edges and leaves the buttons free. Note this position.
3. **Peel the liner** off the adhesive side by a third only, holding the film by its edges. Do not touch the sticky side.
4. **Anchor the first edge** on the mark, press it down with a soft card, then roll the film onto the screen while removing the rest of the liner.
5. **Smooth from the centre outwards** with the card, press the whole outline, then leave it alone for 24 h: small bubbles clear on their own.

**FITTING ORDER**

- **1. The film**, on a bare, clean screen: this is the step that is hard to redo.
- **2. The case**, whose edges cover the outline of the film and hold it down.
- **3. The computer** clipped onto its usual mount, with the case in place.

### Before you start

- A room with **no dust in the air** and no draught; clean hands, computer switched off, dry screen.
- Cleaning kit: damp wipe or alcohol, microfibre cloth, adhesive tape to trap dust.
- Computer **off its mount**: the case slips onto the bare device.

### Compatibility

| | | | |
|---|---|---|---|
| Computer | **Edge 1050** | Film | **Hydrogel, self-healing** |
| Case | **Silicone, black** | Protects from | **Impacts, micro-scratches** |
| Surface | **Oleophobic, glare-free** | Touch | **Preserved** |

02 · DAY TO DAY

# THE CASE, CARE, TROUBLESHOOTING

## Fitting the case

1. **Orient the case:** button cut-outs on the button side, charging port opening at the bottom, opening on the back for the quarter-turn mount.
2. **Hook one corner,** then roll the case over the body, stretching it slightly to the opposite corner: its edges cover the outline of the film without lifting it.
3. **Press the outline** so the edge sits right down all around the screen, without riding onto it.
4. **Check the cut-outs:** every button moves freely, the charging port is reachable, the mount on the back is clear.
5. **Clip the computer** onto its mount, case in place, a quarter turn until it clicks: it should neither turn nor lift.

## Care

- The case: take it off, wash it in warm soapy water, rinse, dry before putting it back. No solvent.
- After a wet ride, take it off once home: water trapped between case and body needs to dry.
- The film: clean it with the microfibre. Micro-scratches fade on their own; a deep scratch that gets in the way of reading means it has done its job: replace it.

**DON'T**

- No film on a cracked screen, no case put on before the film.
- Do not pull the computer upward to remove it: a quarter turn the other way.
- The case does not make the computer waterproof and does not replace a mount in good condition.

## If something goes wrong

| SYMPTOM | LIKELY CAUSE | FIX |
|---|---|---|
| White dot under the film | Trapped dust | Lift the edge, remove it, lay it back |
| Stubborn bubble after 24 h | Dust or greasy smear | Same fix |
| Case lifts one edge of the film | Film off-centre | Refit it before the case |
| Button stiff or stuck | Cut-out misaligned | Lift that side, recentre |
| Computer will not lock | Case rides up over the back opening | Press the edge down, line up, turn until it clicks |
